

Window vent

Has to be open and free of dust in all rooms to secure good ventilation from outside.

Please be aware that the vent can look different depending on your type of windows.

Exhaust device in the bathroom

Should be cleaned and this is most easily done like this:

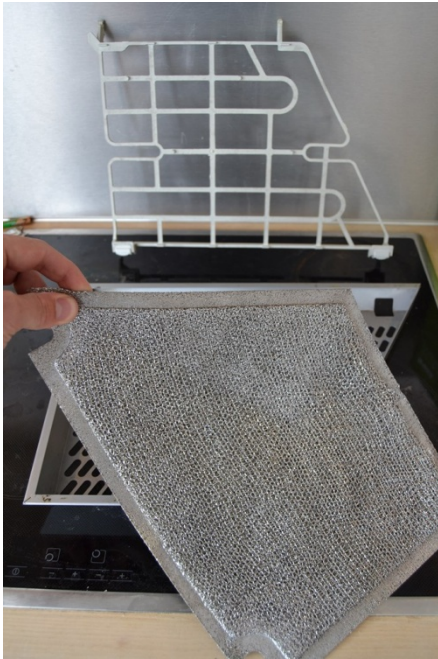

Rinse in hot water hereafter.

Alternatively clean with an old toothbrush/cuetip.

No matter the method you should avoid turning the center part too much.

Exhaust hoods

The grease filter is removed and washed f.i. in the dishwasher.

Clean behind the grease filter with a wet cloth.

Turn on the exhaust and check that the 'door' opens wider – that might make it easier to clean.
